ISOLATION VS. QUARANTINE  Here is the information from the South Dakota Department of Health: https://www.cdc.gov/coronavirus/2019-ncov/vaccines/fully-vaccinated-guidance.html#anchor_1617376555813

And the CDC: https://www.cdc.gov/coronavirus/2019-ncov/if-you-are-sick/quarantine.html

If you test positive, you need to isolate from everyone, including those in your household. Please refer to CDC or the Department of Health as listed above.

As a BHSU student, here is what you need to do if you test positive:

- Please complete and submit the Student Self-Report Form (link) https://cm.maxient.com/reportingform.php?BlackHillsStateUniv&layout_id=8. Please note, you do NOT need to submit your test results to BHSU.

- Isolate yourself for 10 days. You are not to go to the store, run errands, come to campus, attend class face-to-face, or have friends over to your room/apartment/house. Isolation begins from the onset of symptoms or, if you are asymptomatic, from the day you tested positive. Additionally, you must be fever free for at least 24 hours to be released from isolation.

- Once you have submitted the self-report form, your professors will be notified and you will be copied on that email. It is your responsibility to communicate with your faculty to make arrangements for coursework assignments, projects and deadlines. If you become exceedingly ill and need medical accommodations, please contact the Disability Services Coordinator at Jennifer.Lucero@bhsu.edu

- If you live on campus, and have tested positive, you will need to contact Residence Life at (605) 642-6464. They will assist you in making arrangements to move into isolation.

If you are FULLY VACCINATED and have been exposed/come into close contact (the CDC guidelines for exposure include being within 6 feet of an infected person, for a cumulative 15 minutes or more, within 48 hours of the infected individual being tested positive) with someone who has tested positive, you need to get tested 3-5 days after the date of your exposure and wear a mask in public indoor settings for 14 days after exposure or until a negative test result. You may contact Student Health Services to arrange a test. You do not need to quarantine, just monitor for symptoms and wear a mask.

If you are NOT FULLY VACCINATED and have been exposed/come into close contact (the CDC guidelines for exposure include being within 6 feet of an infected person, for a cumulative 15 minutes or more, within 48 hours of the infected individual being tested positive) with someone who has tested positive, you will need to quarantine. Here are the Quarantine Guidelines:
As a BHSU Student who has been exposed and not vaccinated, you need to quarantine for 10 days from the day you were exposed and follow these guidelines. *You may test of our quarantine on day five and return activities after day seven if you test negative.* Please refer to the website above:

- You must limit your exposure to others. You are not to go to the store, run errands, come to campus, attend class face-to-face, or have friends over to your room/apartment/house. If you live with other people, they need to stay away from you. If you need to exercise or get fresh air, you may wear a mask and get outside, but do this alone and not with others.

- Please complete and submit the [Student Self-Report Form (link)](https://cm.maxient.com/reportingform.php?BlackHillsStateUniv&layout_id=8). By completing this form, your professors will be notified and you will be copied on that email. It is your responsibility to communicate with your faculty to make arrangements for coursework assignments, projects and deadlines.

- If you live on campus, you will need to contact Residence Life at (605) 642-6464. They will direct you as to how they want you to keep yourself and your living community safe.

- If you experience any of the following symptoms, please call Student Health Services at 642-6520. We will work with you to get you tested.
  - Nausea
  - Vomiting
  - Body aches
  - Diarrhea
  - Fever/Chills
  - Headache
  - Sore throat
  - Coughing
  - Shortness of breath
  - Loss or change in smell or taste
